Faculty of Medicine

With the support of the National Leader, Great Leader Heydar Aliyev, the foundation of higher medical education was laid at Nakhchivan State University in 1999 with the admission of 25 students to the specialty of "Pediatrics" under the Faculty of "Natural Sciences".

In order to improve the level of training of medical specialists, in 2000, a 4-story, 35-bed hospital teaching-clinical building was put into use for students and teaching staff studying in the specialty "Pediatrics".

By the decision of the University Academic Council dated June 3, 2003, the Pediatrics specialty was separated from the "Natural Sciences-Medicine" faculty and began to operate as an independent "Medicine" faculty.

Since the 2007-2008 academic year, the faculty has started accepting students in the specialty "Medical Prevention". Since the 2011-2012 academic year, due to the reforms carried out in the healthcare system, the specialty "Pediatrics" has been abolished in our republic, and since the 2012-2013 academic year, personnel training has begun in the specialty "Medical Work", and in the specialties "Dentistry" and "Pharmacy".

After the establishment of the Faculty of Medicine, special attention was paid to increasing its scientific potential, and during the past period, 2 of the faculty employees defended their scientific work under the Doctor of Sciences and 9 received scientific degrees, and a number of faculty employees received the scientific titles of professor and associate professor. Currently, 1 of the faculty members is a Doctor of Sciences, and 15 are Doctors of Philosophy and Associate Professors.

In order to further strengthen the material and technical base of the faculty and improve the quality of education, a three-story clinical hospital was put into operation at the university in May 2015. In addition to specializing in the examination and treatment of various diseases, the university hospital has created favorable conditions for students to conduct practical classes on the university premises.

On the 20th anniversary of the establishment of the faculty, namely on June 14, 2019, the new faculty building, which meets modern standards and is equipped with the latest technologies, was put into use by the collective. The new educational building is equipped with equipment that meets modern standards (various simulators, 3D Vivid anatomy set, synthetic cadaver, dental phantom set, etc.), cabins and laboratories, and spacious lobbies and bright auditoriums have been created in a modern architectural style.

As a result of the university's high-level international relations, Thousands of students are currently studying at the faculty, of which more than 500 are citizens of foreign countries.

Students use the relevant hospitals of the Nakhchivan Autonomous Republic as base hospitals in accordance with their specialty profiles. Necessary conditions have been created for most of their clinical lessons to be held in hospitals, directly on patients. At the same time, appropriate facilities have been established in the Republican Hospital to watch operations live in the auditoriums.

Since 2012, the Faculty of Medicine has started training resident doctors at the residency level. To date, about 50 resident doctors have graduated from the residency level. Currently, 52 resident doctors studying in 24 specialties at the residency level are using a number of hospitals in the autonomous republic as an educational and clinical base.

To date, more than 600 medical graduates have been provided to the healthcare systems of Azerbaijan and the Nakhchivan Autonomous Republic from the medical faculty of Nakhchivan State University.

Graduates of the Faculty of Medicine are successfully working both within the country and abroad. Many of the graduates are currently working or continuing their education in foreign countries such as Germany, Spain, the Netherlands, the USA, Nigeria, Turkey, Iran, Cyprus, Georgia, etc.

More than 150 doctors who have graduated from the medical faculty to date are currently working in healthcare institutions of the autonomous republic. 12 of the graduates work as chief physicians in various hospitals. At the same time, 4 of the graduates are doctors of philosophy in medicine.

The Faculty of Medicine has had close relations with a number of Universities of the neighboring Republic of Turkey for many years. Therefore, a number of collaborations, teacher and student mobility are being implemented with these universities in both educational and scientific fields. Every year, senior students of the Faculty of Medicine spend a large part of their summer internships in the clinics of universities located in the cities of Trabzon, Erzincan, Erzurum, Kayseri, Kars, etc. of Turkey.

In order to train high-level medical specialists, variously qualified medical personnel from the Azerbaijan Medical University, developed universities in Russia and the Republic of Turkey have been invited to the faculty many times throughout the year, giving lectures to students and conducting practical classes.

Currently, the Faculty of Medicine is training personnel in 6 specialties (Medicine, Public Health, Therapeutic Work, Medical Prevention, Pharmacy, Dentistry). For the first time, personnel training will be carried out in the Military Medicine specialty in the 2021/22 academic year.

UJWAL PANDE

"My experience at Nakhchivan State University as an international student has been very positive. The university offers quality education with supportive and approachable faculty. One of the biggest advantages is its affordable tuition fees, making it accessible for students from different countries. The campus environment is friendly and culturally diverse, helping international students feel comfortable. Academic resources and facilities are well-maintained and helpful for learning. Overall, it is a great place to study while managing expenses effectively."

Medhavi

"Studying medicine at NSU in such a peaceful and focused atmosphere allows for deep concentration. The professors here are not only expert clinicians but also dedicated teachers who push us to think critically and maintain the highest ethical standards in patient care." I feel local people here are very helpful and very safe for a girl student!

Tanmay Pawar

The medical curriculum at NSU is strictly mapped to NMC India guidelines, ensuring that our clinical training and theoretical knowledge are perfectly synchronized with the requirements for the Fmge/ NExT exam." I am very happy to be part of NSU and achieving my dream to be a doctor!
